ABOUT SRC

STAR RAINBOW Co., Ltd. (SRC) was founded in 1993. The founder, Mr. Bill Lin, has guided all staff along the way, having successfully made the SRC AIRSOFT team a professional manufacturer producing AIRSOFT simulation guns and parts/accessories. In recent years, SRC continues to expand its product range, from the AEG electric guns (developed since the founding period) to the CO2 / GBB pneumatic guns. SRC endeavors to develop different gun types, leading the market and creating popular classic products. SRC provides products from beginner models to elite versions, from utility types to collectible types. In SRC, Survival gamers can find their trusted partners for the survival games, and military collectors can find their favorite selections.

From 2013, SRC spent more than three years to build a new production and operation center, located in Bali District, New Taipei City, due to the insufficient space and equipment of previous production base with the expansion of the company scale and the increasing production volume.

SRC's new production and operation center integrates business units, R & D centers, production and warehousing departments in an eight-story building with new hardware and software equipment. R & D, as the core of product design center, has been updated, utilizing the latest 3D printers and graphics software. The test center has been equipped with a constant temperature test equipment and shooting lanes with different distance.

In addition, to provide our customers a full range of premium user environment, a 800 m² space has been reserved as an indoor CQB venue to test the durability and operating performance of our products.

In this highly competitive and contested era, SRC has grown actively and steadily. We "change" all the time in some aspects, but "never change" in the rest. We "change", to continuously pursue innovative products, to enhance quality and optimize the user experience. And we will "never change", to keep listening to and serving our consumers with open-minded attitudes. SRC team with the completion of the new building will certainly be able to move forward more robustly, continuing to provide the best choice for the majority of AIRSOFT users. SRC will be the synonymous with AIRSOFT!

Production line

The SRC business philosophy is complete vertical integration. We have consolidated with R&D engineering, manufacturing, and production guided by SRC quality control and management disciplines. To date, SRC have sophisticated technical equipment for 3D printer and studio in our new building. We apply our vertically integrated management in everything we do. When buying SRC products, you are not buying any sub-contractor's products from unknown sources. You are getting Taiwan designed products made from SRC controlled manufacturing processes, technical assistance, and customer support.
